**TRITON PCS LICENSE COMPANY L.L.C.  
PHASE II E911 IMPLEMENTATION REPORT  
FEBRUARY 2, 2004**

Triton PCS License Company L.L.C. ("Triton"), by its attorneys, hereby submits its sixth quarterly enhanced 911 ("E911") report to the Federal Communications Commission ("Commission") pursuant to the Commission's decision to afford Tier II carriers additional time to meet their Phase II E911 obligations.<sup>1</sup> In this report, as required by the *Order to Stay*, Triton updates the status of its E911 Phase I and Phase II deployment progress.<sup>2</sup>

**I. STATUS OF PENDING E911 PHASE I AND PHASE II REQUESTS.**

Triton operates a wireless network that covers approximately 13.6 million people in Virginia, North and South Carolina, northeastern Tennessee and northern Georgia. This service area covers six major trading areas ("MTAs") and thirty-six basic trading areas ("BTAs"), primarily in rural and secondary markets. The Triton network currently utilizes TDMA

---

<sup>1</sup> Revisions to the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems, Phase II Compliance Deadline for Non-Nationwide CMRS Carriers, *Order to Stay*, 17 FCC Rcd 14841 (2002) at ¶¶ 28-31 (hereinafter "*Order to Stay*"). Tier II carriers are defined as non-nationwide carriers that had over 500,000 subscribers as of year-end 2001.

technology. Triton is continuing with its plans to overlay GSM technology for the majority of its network and although it anticipates completing this overlay by the end of 2004, it expects to have only a limited number of GSM subscribers by year's end.

Triton continues to make significant progress in its efforts to deploy Phase I location capability services. To date, Triton has received 188 requests for Phase I service. Of those requests, 164 are in service and 24 are pending. For these 24 outstanding requests, the following summary outlines their status:

Current Status	Count
PSAP and Triton mutually agree that the PSAP is not ready for various reasons, including LEC, CPE, selective router and database issues or a PSAP is simply not ready to integrate at this time or PSAP has withdrawn its request.	13
Ready to deploy, mutually agreed-upon schedule in place	10
Less than six months old – in planning stages	1
Total	24

For specific details regarding outstanding requests, including details applicable to each request that has been pending for more than six months, please refer to the Appendix to this report.

Triton also is making significant progress towards fulfilling requests for Phase II service. To date, Triton has received 98 Phase II requests. (Note: several of these requests encompass more than one PSAP entity. In previous reports, these PSAPs were not counted as separate entities. However, to comply with current reporting requirements, these combined PSAPs have been listed separately for tracking purposes.) For all of the requests that came due during the preceding quarter, either Phase II service has been deployed or a mutually agreed upon schedule

---

<sup>2</sup> As required in the *Order to Stay*, Triton is providing this quarterly report to the Executive Directors of APCO, NENA and NASNA and their counsel.

for deployment has been arranged between Triton and the PSAP entity. Accordingly, Triton has met its deployment benchmark for the period preceding this Quarterly Report.<sup>3</sup>

The attached Appendix includes information on all pending requests for Phase I and Phase II service received from individual PSAPs in the format required by the Commission.<sup>4</sup> This Appendix lists the name of the PSAP, the date the request was received, whether or not the request is valid, and the status of the request.<sup>5</sup> To the extent any request has been pending for more than six months, the appendices list specific reasons for the delay, steps taken to resolve the problem, and anticipated date of full completion of the necessary work.<sup>6</sup>

As mentioned in previous reports, Triton has been working with an alternative location technology vendor, Polaris Wireless, to augment Triton's TDOA/AOA location equipment. Several trials of Polaris's technology have occurred with satisfactory results in both performance and accuracy. These trials include end-to-end testing which encompass all aspects of a 911 phase II call, including integration with the MPC, necessary software upgrades in MSCs and call and location data delivery to the PSAP. Triton intends to move forward with its relationship with Polaris and implement the Polaris location technology as an integral part of its location network that will combine Polaris technology with the technology of Triton's current vendors. The use of Polaris Wireless's technology will allow Triton to deploy E911 Phase II requests faster than traditional technologies as well as cover an entire PSAP area upon initial installation. Additionally, to accommodate what are essentially two separate location networks, Triton has

---

<sup>3</sup> See Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems, Petition of City of Richardson, Texas, *Order on Reconsideration*, 17 FCC Rcd 24282 (2002) at ¶ 2 ("Finally, we clarify that nothing in our rules precludes wireless carriers and PSAPs from mutually agreeing to an implementation schedule different from that prescribed by our rules.").

<sup>4</sup> Wireless Telecommunications Bureau Standardizes Carrier Reporting On Wireless E911 Implementation, *Public Notice*, CC Dkt. 94-102, DA 03-1902 (rel. Jun. 6, 2003).

<sup>5</sup> *Order to Stay* at ¶ 29.

deployed TechnoCom's LXS platform which allows the isolation and mediation of multiple PDEs within its location network. The LXS platform allows Triton the flexibility it needs to tailor its location network to accommodate multiple network situations, including different air interfaces and infrastructure vendors, different network elements, multiple PDE vendors, as well as multiple individual PSAP configurations (NCAS, Hybrid CAS, etc.).

## **II. GSM OVERLAY NETWORK**

As outlined in its previous quarterly reports, Triton intends to utilize the network-based TDOA/AOA location solution for its GSM network. Triton continues working with its network-based location vendor, Andrew, formerly Grayson Wireless, to implement GSM capability within its TDOA/AOA network-based location equipment. As described previously, Triton's network configuration has made it difficult to incorporate the necessary hardware to support the Abis monitoring unit (AMU). However, Triton's network engineers are working to resolve the issues and it is anticipated that they will be able to address them to enable the TDOA/AOA location network to operate for the GSM air interface.

In addition, Triton is working with its alternative location vendor, Polaris Wireless, to extend the capabilities of the Polaris location system to the GSM air interface as well. Preliminary information from Polaris's European GSM testing suggests that the GSM solution will as effective as the TDMA offering.

As discussed previously, Triton offers GSM service to Triton subscribers only in selected markets and thus far has a very limited number of GSM customers. While Triton expected to have a Phase II GSM solution available sooner, Triton is coordinating GSM Phase II implementation with affected PSAPs. .
